(717) 379-3957 | zhen_lin@berkeley.edu | Berkeley, CA | linkedin.com/in/zhen-lin-psu

PROFESSIONAL SUMMARY

Supply Chain Analyst with 2+ years of analytics experience across Fortune 1 retail and biotech-scale operations, focused on inventory planning, replenishment, and cross-functional KPI reporting. Builds SQL/DAX-driven dashboards and root-cause models that give supply planning and operations teams a single source of truth, then validates every rule against stakeholder input and floor-level realities before it ships. Uses AI tools (Microsoft Copilot, Claude Code) to speed up dashboard and model development without sacrificing rigor. Seeking Supply Chain Analyst roles.

Tools: SAP, SQL, Databricks, Power BI (DAX), Python, R, Google BigQuery, Tableau, Excel, SharePoint, Figma, Canva, Microsoft Copilot, Claude Code.

Core Competencies: Inventory & Replenishment Planning, Root Cause Analysis, KPI Reporting & Dashboarding, Data Modeling, Stakeholder Analysis, Process Mapping, Data Visualization.

EDUCATION

University of California, Berkeley

M.S. Management Information Systems

Berkeley, CA

August 2025 – Current

Relevant Courses: Product Management, Programming and Computation, Research Design and Applications for Data and Analysis, Information Organization and Retrieval, Causal Inference, UX Research, Quantitative Research, Data Mining

The Pennsylvania State University

B.S. Supply Chain and Information Systems

University Park, PA

2019 – 2023

GPA: 3.83/4.00 | Dean's List: 7/8 Semesters

EXPERIENCE

BioMarin Pharmaceutical Inc.

Novato, CA

Supply Chain Operations Intern

June 2026 – August 2026

- Architected a cross-functional Power BI KPI tool (Raw Material Batchboard) tracking the full raw material lifecycle — procurement, inventory, testing, and manufacturing — by unifying SAP and LIMS data into one source of truth across 446 tracked batches.
- Used Microsoft Copilot to accelerate SQL and DAX development against ambiguous, cross-team requirements, compressing the path from rough prototype to a validated dashboard into a single summer.
- Validated every dashboard rule against real operations with QC, QA, and Operations process experts, ensuring the logic reflected how the Novato site actually runs rather than what AI-assisted prototyping alone implied.
- Built a three-input compliance model flagging inventory placement discrepancies across 1,798 locators and 262 materials, partnering with Operations to validate and maintain the rules.

Sam's Club/Walmart

Bentonville, AR

Supply Chain Integrated Planning Senior Analyst

July 2023 – December 2024

- Analyzed end-to-end performance of the Sam's Collect shipment network (23,000+ lanes), synthesizing operational data to identify bottlenecks and deliver recommendations that aligned ordering systems with on-time delivery goals.
- Designed and launched a centralized Lead-Time Matrix dashboard using SQL and Power BI, establishing a single source of truth that enabled supply and inventory planning teams to make data-driven purchase order and replenishment decisions.
- Conducted root cause analysis across legacy ordering systems using SQL to identify data discrepancies; documented findings and standardized shipment routing workflows, reducing PO creation errors organization-wide.
- Modeled transportation optimizer logic on terabyte-scale datasets, translating analytical findings into targeted lane parameter recommendations that increased on-time delivery performance by 5%.
- Designed comprehensive user documentation and training modules for replenishment systems, facilitating smoother supplier onboarding and reducing support tickets.

Sam's Club/Walmart

Bentonville, AR

Supply Chain Integrated Planning Intern

June 2022 – August 2022

- Built an executive-facing perishable network audit dashboard in Power BI and SQL, translating raw lane performance data into clear KPIs to support data-driven decision-making by senior leadership.
- Designed and implemented a cross-functional information feedback loop across three stakeholder teams, ensuring alignment on transit audit workflows and surfacing 600+ lanes requiring lead-time updates within the first week.
- Selected as one of only seven interns (top 1% of class) to present analytical findings and data-backed recommendations to Senior Leadership, demonstrating ability to communicate insights to executive stakeholders.

PROJECTS

DoorDash AI Chatbot Feature Development

Berkeley, CA

Product Analytics Project

August 2025 – December 2025

- Ran structured user research and applied Agile methodology to convert ambiguous ordering-flow friction points into business requirements and a prioritized product backlog for an AI-powered chatbot feature.

ACTIVITIES / VOLUNTEERS

Penn State Chinese Student and Scholars Association

University Park, PA

Member of Public Relations Department

Sept 2020 – May 2023

- Managed cross-functional stakeholder communication for a 200+ member organization, ensuring consistent information flow between internal teams and external partners.
- Negotiated and documented a sponsorship agreement with an off-campus firm, securing resources for the organization.
